

AEROSPACE SUPPLY CHAIN

In addition to airside-related activities, the Aviation District has established a dedicated aerospace supply chain area covering over 157,000m². Businesses from Tier-1 to Tier-3, as well as small to medium enterprises, will be key components of the supply chain for the Middle East aviation industry.

The facility optimizes operational and financial efficiency and was designed to establish a cohesive and coordinated value chain of support and ancillary services. It is ideal for MROs (maintenance, repair and overhauling), business aviation, companies that form part of the MRO supply chain, light industrial units, spares and distribution centers, and any businesses related to aviation or transport activities.

IMPORTANT MILESTONES IN 2015
